

## 2018/11 博士班資格考： 機率與統計

1. (20%)
  - (a) Give definitions of **prior distribution** and posterior **distribution**, based on the pdf  $f(x_1, x_2, \dots, x_n, \theta)$  with  $\theta$  as the particular parameter variable.
  - (b) Given the posterior distribution, find the Bayes estimate of  $\theta$ .
  
2. (20%) A random sample of 25 students obtained a mean of 82 and a variance of 8 on a college placement test in math. Assume the scores to be normally distributed, construct the 98% confidence interval for  $\sigma^2$ .
  
3. (20%) A RV  $X$  has the distribution as
$$P(X = k) = pq^k, \quad k = 0, 1, \dots$$
Find  $\Gamma(z)$  and use this to find the mean and variance.
  
4. (20%)Let  $X$  and  $Y$  be two RVs.  $X$  is a Poisson distribution with parameter  $\lambda$ . If  $y = x^2$ , find the *p.d.f.* of  $Y$ .
  
5. (20%) Given  $n$  RVs,  $x_1, x_2, x_3, \dots, x_n$  and a RV  $S$ , one wish to estimate  $S$  by
$$\tilde{S} = a_1x_1 + a_2x_2 + \dots + a_nx_n = \widetilde{E}\{S | x_1, x_2, \dots, x_n\}.$$
Define the MS error value by
$$P = E\{|S - \tilde{S}|^2\}.$$
Show that the MS error is minimized if
$$E\{(S - \tilde{S})x_i^*\} = 0, \text{ for } i = 1, \dots, n.$$
This is also called the orthogonality principle.
