

## 2019/04 博士班資格考： 機率與統計

1. (20%) Let  $x_1, x_2, \dots, x_n, \dots$  be a sequence of i.i.d. random variables with uniform distributed pdf in the interval  $[-1.0, 1.0]$ .

(a) Let  $z = x_1 + x_2$ , find the *pdf* of  $z$ .

(b) Let  $z = \sum_{i=1}^{\infty} x_i$ , find the *pdf* of  $z$

2. (20%) Consider the R.V. with the density function as

$$f(x) = \begin{cases} \frac{1}{\beta} e^{-x/\beta} & x \geq 0 \\ 0 & \text{otherwise} \end{cases}$$

Suppose that independent observations  $x_1, x_2, x_3, \dots, x_n$  are taken from this distribution. Then,

a. What is the likelihood function

b. Find the MLE for the parameter,  $\beta$

3. (20%) Given a sequence of RVs  $x_1, x_2, \dots, x_n$ ,

(a) Give the definition of the correlation of two of the RVs.

(b) Given the definition of the correlation matrix of these RVs.

(c) Prove that the correlation matrix is non-negative definite.

(d) In what condition that the correlation matrix is symmetry with respect to the diagonal?

4. (20%)

(a) State the differences among independent, uncorrelated, and orthogonal

(b) What is Strict Sense Stationary (SSS) and what is Wide Sense Stationary?

5. (20%)

Let  $X$  and  $Y$  be two RV's with finite variances. Show that

$$E^2\{XY\} \leq E^2\{X\}E^2\{Y\}.$$

TABLE A.3 Areas Under the Normal Curve
